Frequently Asked Questions

> **Where can I buy Colad Snap Lid System?**
You can buy Colad Snap Lid System with your preferred Colad dealer. If you don't have a dealer selling the product, we can help you find a dealer who can can offer you our paint application system. If you need any help to find a dealer, please contact us through the contact form.

> **How can I find the right adapter for Colad Snap Lid System?**
We have created an adapter selector that helps you find the right adapter based on your spray gun brand and type. You can find this adapter tool here. Can't find the right adapter for your spray gun? Contact us and we'll help you find the adapter you need.

> **What micron filter do I need to use?**
Colad Snap Lid system is designed as a paint application system suitable for all types of paint. We'd advice to check with your paint supplier which micron to use for a specific type of paint. In general the 90 micron filter can be used for clear coat, the 130 micron for waterbased base and/or clear coat, the 190 micron for conventional base coat and the 280 micron for primer. However this might vary depending several conditions such as the recommendation from the paint manufacturer.

> **How can I achieve optimum output flow?**
To get the best output from Colad Snap Lid System you should prevent too much air remaining between your spray gun and the built-in filter. This can be done by slowly tilting the gun after attaching the paint cup, in order to let the air out and the paint in, or by tilting the gun back and forward and release a bit of output. Once the transparent part of the lid between the filter and the spray gun is over 2/3 filled with paint, you will achieve the best paint flow.

> **What is the best way to attach to lid?**
For a visualization of the recommended way to place the lid on the cup you can watch our 'Colad Snap Lid System user manual' video. We recommend to attach the lid from one side, and slowly use both hands around both sides of the lid towards the other side. The lids are made to fit the cup perfectly, therefore you don't have to apply excessive force to attach the lid properly.
